SPARTACOTE™ FLEX XT™

SPARTACOTE™ FLEX XT™ is a low VOC, fast-curing two-part polyaspartic aliphatic polyurea sealer/finish coating for protective applications. Used as a top-coat, the material is applied in single or multiple coat applications by brush, roller or squeegee in varying thicknesses to concrete. It can be applied over resinous flooring surfaces such as polyaspartics or epoxies. Important characteristics of SPARTACOTE FLEX XT are its excellent inter-coat adhesion, UV resistance and optimal colour/gloss retention.

FEATURES/BENEFITS
- Excellent abrasion, impact & wear resistance
- UV-Resistant; retains optical clarity of clear sealer/finish
- Short re-coat time: 1-2 hours
- Low temperature cure (-34°C)
- Excellent chemical & stain resistance, resistant to Skydrol®
- Resistant to hot-tyre pickup
- Micro-Media agents can be introduced as traction additives
- Low VOC content; < 50 g/L
- Tolerant to 149°C for random, incidental heat contact
- Meets USDA/CFSAN, U.S. Food Code, physical facilities criteria as outlined in 6.100.11 Surface Characteristics USDA acceptable.

USES
- Suitable for high traffic
- Interior and exterior applications
- Ideal for clear top coat sealer
- Suitable applications: walkways, commercial applications, industrial facilities, and garage floors

COLOUR
SPARTACOTE FLEX XT is available in a clear finish as well as 14 standard SPARTACOTE colours.
Specifications are subject to change without notification. Technical data shown in product data sheets are typical but reflect laboratory test procedures conducted in laboratory conditions. Actual field performance and test results will depend on installation methods and site conditions. Field test results will vary due to critical job site factors. All recommendations, statements and technical data contained in this data sheet are based on tests we believe to be reliable and correct, but accuracy and completeness of said tests are not guaranteed and are not be construed as a warranty or guarantee of any kind. Satisfactory results depend upon many factors beyond the control of LATICRETE Australia. User shall rely on their own information and tests to determine suitability of the product for the intended use and user assumes all risk, loss, damage, expense and liability resulting from their direct use, indirect use or consequential to their use of the product. LATICRETE shall not be liable to the buyer or any third party for any injury, loss or damage directly or indirectly resulting from use or inability to use the product.

INSTALLATION
Store in a cool, dry place prior to application.

Surface Preparation
Always mechanically prepare (profile) surface. An open, porous surface is necessary for proper bonding. The surface must be deemed structurally and mechanically sound, clean, and dry. Proper surface preparation is required for decorative-concrete, thin-film “Class-A type” flooring systems or sealer/finish coatings. This is best achieved with mechanical grinding machines using diamond heads achieving a final 30 to 100-grit profile. Recommended surface profile is a CSP-2, Reference ICRI Technical Guidance No. 03732. Surfaces to be coated must be free of sealers, grease and any other contaminants that may impede adhesion. Always check the surface for any bond inhibitors prior to application. Do not use Alcohol to clean or tack substrate or previous coat prior to application. Any repairs must be addressed prior to application and should be repaired in accordance with ICRI standards. A moisture emission measurement system is necessary to assess the moisture drive of a concrete slab prior to installation of any toppings or coatings. The relative humidity of the slab must not exceed 75% as tested per ASTM F2170 Relative Humidity in Concrete Slabs test. If there is a moisture emission situation in excess of the above rate, use LATICRETE Vapour Reduction Coating. The application process will depend on the system being installed, reference appropriate specification for details.

Pigmented Coatings
Add full contents of SPARTACOTE Polyaspartic Pigment directly into short filled Part A pigment base. Mix pigment into Part A with a slow speed drill mixer for 2 minutes to fully disperse the ospartic pigments. Failure to properly mix pigments may lead to an inconsistent finish and reduced product performance.

Mixing Part A with Part B
Mix part A and part B in equal parts (1:1) using a clean, dry working vessel. Stir with a drill mixer on slow speed for 2 minutes. Avoid over-mixing or creating a vortex that would introduce air. Do not mix below the dew point, which will shorten the pot life. No induction time is required prior to use. If micro-media agents (e.g. SPARTACOTE Blended Quartz Aggregate) are to be incorporated, they are to be added after thoroughly mixing A and B. Product may be thinned up to 10% with Xylene. Do not use alcohol at any point during application of the system.

Flat or foam squeegee application is recommended with a double perpendicular back-roll. Roller must have an industrial grade phenolic resin core with a synthetic nap or lambs-wool cover. 10mm nap. Small chip brushes may be used along the perimeter and in more difficult to reach areas. SPARTACOTE FLEX XT will typically be dry to the touch 1 to 2 hours after application, dependent on ambient temperature, slab temperature and humidity. Product may be re-coated at that time or when deemed appropriate by system specification. Foot traffic is generally acceptable after 2 to 4 hours with 24 hours minimum required for vehicular traffic.

MAINTENANCE

The long term performance, appearance, and life expectancy of wear surface products are critically dependence upon a good routine maintenance program designed specifically for the installed wear surface. SPARTACOTE polyaspartic and epoxy floor coating systems are nonporous, causing dirt and contaminants to remain on the surface. The use of properly placed walk-off mats, inside and outside, will help increase the life of the floor. Recommend maintenance program consist on frequent and thorough cleaning utilizing a neutral pH cleaner (e.g. Simple Green®). Frequency of washing will vary depending on floor usage type, traffic and age.

Please Refer to TDS 1420 “SPARTACOTE Floor Maintenance Guide” available at www.laticrete.com.au for more information.
