SPARTACOTE™ SURFACE BUILD 150™

SPARTACOTE™ SURFACE BUILD 150™ is a medium viscosity, 100% solids epoxy coating. This product may also be used as a filler coat on concrete that has been mildly spalled due to excessive wear. SPARTACOTE SURFACE BUILD 150 also provides a high gloss finish. SPARTACOTE SURFACE BUILD 150 can be applied to primed concrete surfaces in manufacturing areas, aisle ways, commercial and institutional facilities.

FEATURES/BENEFITS

- Low VOC
- Impact Resistant
- Excellent adhesion to concrete and ferrous metal
- Superior inter-coat adhesion with SPARTACOTE Polyaspartics and Epoxy
- Excellent carbonation resistance
- Excellent Build Coat over existing Tile

SHELF LIFE

Two years unopened. Store at 4° to 24°C in a covered area (out of the sun). Material should be kept in a cool dry place prior to application. Do not allow to freeze.

PACKAGING

Part A
7.6 L (2 gal) Pail
18.9 L (5 gal) Pail

Part B
3.7 L (1 gal) Pail
18.9 L (5 gal) Pail

COLOUR

Available in Clear, Sand Beige and Light Grey available upon request.
Limitations
- This product is not recommended for exterior applications or immersion service.
- Do not apply this product at ambient or floor temperatures below 13°C or over 32°C or if the relative humidity is above 92%.
- Please note that with all resinous coating systems, exterior full sun environments in warm climates may exhibit above average surface temperatures. This is especially true with darker finishes. As a result, resinous systems may not be ideally suited for exterior pool deck applications.

Cautions
FOR PROFESSIONAL USE ONLY
- Thoroughly read all technical data sheets, application guidelines, warranty disclaimers and Safety Data Sheets (SDS) prior to use. Application guides are available at www.laticrete.com.au
- Wear safety eye protection when applying. Contact with eyes may cause irritation. Flush eyes with water for 15 minutes, if symptoms persist seek medical attention.
- Wear safety gloves.
- Until cured, may irritate eyes and skin. Avoid contact with eyes and or prolonged contact with skin. In case of contact, flush thoroughly with water.
- Material should be kept in a cool dry place prior to application
- Product must not freeze.

Mock-ups and field test areas are required in order to validate performance and appearance related characteristics (including but not limited to colour, inherent surface variations, wear, anti-dusting, abrasion resistance, chemical resistance, stain resistance, coefficient of friction, etc.) to ensure system performance as specified for the intended use, and to determine approval of the decorative flooring system.

INSTALLATION
Surface Preparation
Assure substrate to be coated is clean, dry, and in sound condition. All laitance, curing compounds, concrete hardeners, and other surface contaminants must be removed. Shot-blast or acid etch areas to be coated.
Product must not freeze. Combine Part A with Part B, mechanically mix with a power drill at low speed for approximately 2 minutes. No induction time is required prior to use. If micro-media agents are to be incorporated, they are to be added after thoroughly mixing A and B. Material may be thinned with up to 10% xylene.

Mixing
11.4 L Kits
Stir contents of Part A 11.4 L Pail. Then add 3.8 L can of Part B activator, mechanically mix for approximately 2 minutes.

18.9 L Pails
Stir contents of Part A 18.9 L pail. Mix by volume, 2 parts Component A to 1 Part Component B activator. Mechanically mix for approximately 2 minutes.

NOTE: Once mixing is complete, immediately pour the entire contents onto the floor. Leaving mixed material in the bucket will generate excessive heat.

Application:
Flat or Notched squeegee application is recommended, with perpendicular back-roll using an 46 cm long 10 mm nap roller to achieve uniform film thickness. Small chip brushes may be used along the perimeter and in more difficult to reach areas.

Clean up with Xylene or Acetone immediately following use.

AVAILABILITY AND COST
Availability
LATICRETE® and SPARTACOTE® materials are available worldwide.

For Distributor information:

MAINTENANCE
The long term performance, appearance, and life expectancy of wear surface products are critically dependent upon a good routine maintenance program designed specifically for the installed wear surface. SPARTACOTE polyaspartic and epoxy floor coating systems are nonporous, causing dirt and contaminants to remain on the surface. The use of properly placed walk-off mats, inside and outside, will help increase the life of the floor. Recommend maintenance program consist on frequent coatings or copings, concrete hardeners, and other surface contaminants must be removed. Shot-blast or acid etch areas to be coated.
Product must not freeze. Combine Part A with Part B, mechanically mix with a power drill at low speed for approximately 2 minutes. No induction time is required prior to use.
