SPARTACOTE™ FLEX SB™

SPARTACOTE™ FLEX SB™ is a fast-curing two-part polyaspartic aliphatic polyurea sealer/finish coating for both decorative and protective applications. As an industrial maintenance coating, this material is self-priming and may be applied in single or multiple coats by brush, roller, broom, squeegee, or in varying thicknesses to a variety of substrates including concrete and metal. It can be applied over decorative concrete surfaces such as acid, colour- or dye-stained concrete, as a pigmented high performance coating, or employed within seamless multi-build chip/quartz flooring systems. SPARTACOTE FLEX SB provides excellent impact, abrasion, and chemical resistance characteristics, with flexible properties. Suitable for high traffic interior or exterior applications, the material is ideal for clear topcoat sealer applications over decorative concrete, walkways, commercial applications, industrial facilities, and garage floors.

FEATURES/BENEFITS
- Excellent penetration & bond strength
- Self-Priming
- Excellent abrasion, impact & wear resistance
- UV-Resistant; retains optical clarity of clear sealer/finish
- Short re-coat time: 1-2 hours
- Low temperature cure (-34°C)
- Excellent chemical & stain resistance, resistant to Skydrol®
- Resistant to hot-tyre pickup
- Micro-Media agents can be introduced as traction additives
- Tolerant to 149°C for random, incidental heat contact
- Meets USDA / EFSAN, U.S. Food Code, physical facilities criteria as outlined in 6.100.11 Surface Characteristics USDA acceptable.

USES
- Suitable for high traffic
- Interior and exterior applications
- Ideal for clear top coat sealer
- Suitable applications: walkways, commercial applications, industrial facilities, and garage floors

SUITABLE SUBSTRATES
- Suitable Substrates
- Concrete
- Metal
- Epoxy

MANUFACTURER
LATICRETE Australia Pty Ltd
29 Telford Street
Virginia, QLD 4014 Australia
Telephone: 07 3865 1599
Toll Free: 1800 331 012
Fax: 07 3865 2250
Internet: www.laticrete.com.au

SHELF LIFE
12 months unopened. Store at 4° to 38°C in a covered area (out of the sun). Store in a cool, dark place with minimal temperature function.
Packaging
7.6 L (2 gal) Clear and Low Gloss Kits:
Part A: 3.8 L (1 gal) pail
Part B: 3.8 L (1 gal) pail
Clear Units:
Part A: 18.9 L (5 gal) pail
Part B: 18.9 L (5 gal) pail
7.6 L (2 gal) Pigment Base Kits:
Part A: Short Filled 2.8 L (0.75 gal) in 3.8 L (1 gal) pail
Part B: 3.8 L (1 gal) pail
Pigment Base Units:
Part A: Short Filled 14.2 L (3.75 gal) in a 18.9 L (5 gal) pail
Part B: 18.9 L (5 gal)pail
Approximate Coverage
Coverage rates may vary greatly depending on substrate porosity. Coverage rates are contingent on solids content. Consult appropriate application guide system thickness and coating application.

Colours
SPARTACOTE® FLEX SB® is available in 2-levels of sheen for clear sealers/finish top coats (Gloss, Low Gloss) as well as a wide range of colours. Refer to SPARTACOTE FLEX SB Colour Chart for standard colour selections.

Limitations
- Not intended for use over countertops
- Not intended for use in areas that experience significant thermal shock on a continual basis.
- Please note that with all resinous coating systems, exterior full sun environments in warm climates may exhibit above average surface temperatures. This is especially true with darker finishes. As a result, resinous systems may not be ideally suited for exterior pool deck applications.

Cautions
FOR PROFESSIONAL USE ONLY
- Thoroughly read all technical data sheets, application guidelines, warranty disclaimers and Safety Data Sheets (SDS) prior to use. Application guides depending on the dye system employed are available at www.laticrete.com.au
- Polyspartic aliphatic polyurea products contain chemical ingredients that are considered hazardous. Read the container label warning and SDS prior to use.
- Wear safety eye protection and gloves when applying. Contact with eyes may cause irritation. Flush eyes with water for 15 minutes, if symptoms persist seek medical attention.
- Tape colour transition lines firmly to reduce dye “bleed” under taped line.
- Material should be kept in a cool dry place prior to application
- Product is combustible. Keep away from open flames and apply in well ventilated area.
- Do not use alcohol at any point during application of the system.
- Surface temperature will become elevated when exposed to direct sunlight in warmer climates.

Mock-ups and field test areas are required in order to validate performance and appearance related characteristics (including but not limited to colour, inherent surface variations, wear, anti-dusting, abrasion resistance, chemical resistance, stain resistance, coefficient of friction, etc.) to ensure system performance as specified for the intended use, and to determine approval of the decorative flooring system.

Specifications are subject to change without notification. Technical data shown in product data sheets are typical but reflect laboratory test procedures conducted in laboratory conditions. Actual field performance and test results will depend on installation methods and site conditions. Field test results will vary due to critical job site factors. All recommendations, statements and technical data contained in this data sheet are based on tests we believe to be reliable and correct, but accuracy and completeness of said tests are not guaranteed and are not be construed as a warranty or guarantee of any kind. Satisfactory results depend upon many factors beyond the control of LATICRETE Australia. User shall rely on their own information and tests to determine suitability of the product for the intended use and user assumes all risk, loss, damage, expense and liability resulting from their direct use, indirect use or consequential to their use of the product. LATICRETE shall not be liable to the buyer or any third party for any injury, loss or damage directly or indirectly resulting from use or inability to use the product.

INSTALLATION
Surface Preparation
Always mechanically prepare (profile) surface. An open, porous surface is necessary for proper bonding. The surface must be deemed structurally and mechanically sound, clean, and dry. Proper surface preparation is required for decorative-concrete, thin-film “Class-A type” flooring systems or sealer/finish coatings. This is best achieved with mechanical grinding machines using diamond heads achieving a final 30 to 100-grit profile. Recommended surface profile is a CSP2, Reference ICRI Technical Guideline No. 03732. Surfaces to be coated must be free of previous coatings, sealers, grease and any other contaminants that may impede adhesion. Always check the surface for any bond inhibitors prior to application. Do not use Alcohol to clean or tack substrate or previous coat prior to application. Any repairs must be addressed prior to application and should be repaired in accordance with ICRI standards. Moisture emission testing is necessary to assess the moisture drive of a concrete slab prior to installation of any toppings or coatings. The maximum amount of moisture in the concrete substrate should not exceed 7.5% relative humidity as measured with moisture probes. If there is a moisture emission situation in excess of the above rate, use LATICRETE Vapour Reduction Coating. The application process will depend on the system being installed, reference appropriate specification for details.
DISCLAIMER

§ The information contained in this document is given in good faith and to the best of our knowledge is true and accurate.

§ This information is subject to change without notice and it is the responsibility of the user to obtain up to date and current information.

§ The use of this product is beyond our control and LATICRETE is not responsible for any loss or damage arising from the incorrect use of this product.

MAINTENANCE

The long term performance, appearance, and life expectancy of wear surface products are critically dependent upon a good routine maintenance program designed specifically for the installed wear surface. SPARTACOTE polyaspartic and epoxy floor coating systems are nonporous, causing dirt and contaminants to remain on the surface. The use of properly placed walk-off mats, inside and outside, will help increase the life of the floor. Recommend maintenance program consist on frequent and thorough cleaning utilizing a neutral pH cleaner (e.g. Simple Green®). Frequency of washing will vary depending on floor usage type, traffic and age. Please Refer to TDS 1420 “SPARTACOTE Floor Maintenance Guide” available at www.laticrete.com.au for more information.
