MULTIFLEX Adhesive

MULTIFLEX Adhesive is an economical, flexible, rubber, polymer fortified cementitious thin set powder for installing ceramic tile and natural stone to floors and walls.

Features/Benefits

- Creamy
- Long open time
- Non-sag
- Interior and exterior
- Thermal shock resistant
- For floor (light duty) and wall applications
- Very good impact resistance

Uses

Designed for interior and exterior floor and wall installations of ceramic tile and natural stone over concrete, cement sheet, suitable waterproof membranes, screeds and rendered substrates.

Packaging/Colour

- 20 kg bag; 56 bags per pallet
- Off-White; Grey

Suitable Substrates

- Concrete
- Cement block
- Cement mortar beds
- Cement render
- Concrete masonry
- Cement backer board
- Suitable waterproof membranes
- Gypsum wall board

* Interior use only
** Consult cement backer board manufacturer for specific installation recommendations and to verify acceptability for exterior use

Manufacturer

LATICRETE Australia Pty Ltd
29 Telford Street
Virginia, QLD 4014 Australia

Telephone: 07 3865 1599
Toll Free: 1800 331 012
Fax: 07 3865 2250
Internet: www.laticrete.com.au
Approximate Coverage
- 8 – 9 m² with 6 mm x 6 mm notched trowel
- 5 – 6 m² with 10 mm x 10 mm notched trowel
Coversion will depend on how the trowel is used and surface regularity

Shelf Life
Factory sealed containers of this product are guaranteed to be of first quality for one (1) year* if stored off the ground in a dry area.
* High humidity will reduce the shelf life of the bagged product

Limitations
- Use LATAPOXY® 300 Adhesive for installing green marble or water sensitive natural stone and agglomerates.
- Use white adhesive for white or light coloured marble/stone.
- Not for heavy duty applications.
- Not for direct use over tile, vinyl, plastic, steel, hardwood or strip wood flooring, particle board, Luan plywood, or Masonite®.
- Adhesives/mastics, mortars and grouts for ceramic tile, pavers, brick and stone are not replacements for waterproof membranes. When a waterproof membrane is required, use a LATICRETE Waterproof Membrane.
- NOTE: Surfaces must be structurally sound, stable and rigid enough to support ceramic/stone tile, thin brick and similar finishes. Substrate deflection under all live, dead and impact loads, including concentrated loads, must not exceed L/360 for thin bed ceramic tile/brick installations or L/480 for thin bed stone installations where L=span length unless more stringent deflection requirements are specified by building codes or building professionals.

Cautions
- During cold weather, protect finished work from traffic until fully cured.
- Not for use in immersed installation like swimming pools.
- Some marbles and other natural stone have low flexural strength and may not be suitable for installation over wood floors.
- Contains Portland cement and silica sand. May irritate eyes and skin. Avoid contact with eyes or prolonged contact with skin. In case of contact, flush thoroughly with water. Use rubber gloves when handling and wear eye protection to avoid eye contact.
- Do not take internally. Silica sand may cause cancer or serious lung problems. Avoid breathing dust. Wear a respirator in dusty areas.
- Keep out of reach of children.

TECHNICAL DATA
LATICRETE Multiflex Adhesive exceeds the requirements of a C1TES1 Adhesive as per AS ISO13007.1&2.

Working Properties at 21°C

INSTALLATIONS
Unless otherwise noted by LATICRETE, all work should be in accordance with AS3958.1-2007.

Preparation
All surfaces should be between 4°C and 32°C and structurally sound, clean and free of all dirt, oil, grease, loose peeling paint, concrete sealers or curing compounds. Rough or uneven concrete surfaces should be made smooth with LATICRETE Latex Portland Cement underlayment to provide a wood float (or better) finish. Dry, dusty concrete slabs or masonry should be dampened and excess water swept off. Installation may be made on a damp surface. New concrete slabs shall be cured and 7 days old before application. All slabs must be plumb and true to within 5 mm in 3 m. Expansion joints shall be provided through the tile work from all construction or expansion joints in the substrate. Follow Australian Standards requirements for Expansion Joints in AS3958.1 Section 5.4.5 & AS3958.2 Section 4.5 or TCNA detail EJ-171 “Movement Joints — Vertical & Horizontal”. Do not cover expansion joints with adhesive.

Mixing
Place potable water into a clean pail and add MULTIFLEX Adhesive powder. Mix by hand or with a slow speed mixer to a smooth, workable consistency. Use approximately 6.5 – 7 litres of water per 20 kg bag; this will yield approximately 20 litres of adhesive. Allow mortar to slake for 5 – 10 minutes. Remix without adding any more water or powder.

1 United States Patent No.: 6,881,768 (and other Patents).
**Application**

Apply mortar to the substrate with the flat side of the trowel, pressing firmly to work into surface. Comb on additional mortar with the notched side. Note: Use the proper sized notched trowel to ensure full bedding of the tile. Spread as much mortar as can be covered with tile in 15 — 20 minutes. Back butter large tiles >200 mm x 200 mm to provide full bedding and firm support if required. Place tiles into wet, sticky mortar and beat in using a beating block and rubber mallet to imbibe tile and adjust level. Check mortar for complete coverage by periodically removing a tile and inspecting bedding mortar transfer onto back of tile. If mortar is skinned over (not sticky), remove and replace with fresh mortar.

**Grouting**

Grout after a minimum of 12 hours curing at 21 °C using PERMACOLOR®. For maximum stain resistance use SPECTRALOCK® PRO Premium Grout†.

**Cleaning**

Clean tools and tile work with water while mortar is fresh.

**AVAILABILITY AND COST**

**Availability**

LATICRETE and LATAPOXY® materials are available worldwide.

For Distributor information:

Toll Free: 1800 331 012
Telephone: 07 3865 1599
For online distributor information, visit LATICRETE at [www.laticrete.com.au](http://www.laticrete.com.au)

**Cost**

Contact a LATICRETE Distributor in your area.

**MAINTENANCE**

LATICRETE and LATAPOXY grouts require routine cleaning with a neutral pH soap and water. All other LATICRETE and LATAPOXY materials require no maintenance but installation performance and durability may depend on properly maintaining products supplied by other manufacturers.
