Antimicrobial Protection in LATICRETE Products

LATICRETE offers antimicrobial protection to continuously fight the stain-causing growth of mould and mildew for the lifetime of the installation.

Why is antimicrobial protection important to your installation?

1. It protects the substrate and wall cavity from costly damage.

Tile and stone are NOT waterproof. Without proper protection and installation, water will find its way to your substrate and wall cavities causing costly water damage and promoting the growth of mould and mildew. LATICRETE offers the industry standard for waterproofing membranes that will prevent water damage to your substrate and wall cavities and are backed by the most comprehensive warranties available.

2. It protects the look of your grout.

Cement grouts can crack, allowing water to seep in and provide the perfect environment for mould and mildew growth. SPECTRALOCK® PRO Grout helps to prevent unsightly cracks, mould and mildew by offering unmatched durability, colour uniformity, and antimicrobial protection.

3. It allows LATICRETE to offer a complete system of antimicrobial protection.

LATICRETE offers antimicrobial protection in waterproofing membranes, anti-fracture membranes, adhesives, grouts and sealants; the industry's most complete system of antimicrobial protection, all working to prevent mould and mildew growth in your tile and stone installations.

LATICRETE PRODUCTS CONTAINING ANTIMICROBIAL PROTECTION

Multipurpose Adhesive

4-XLT
SURE SET™

Specialised Adhesive

Glass Tile Adhesive
Multimastic Premium Adhesive
AFA Anti-Fracture Adhesive
125 Sound & Crack Adhesive

Sealant

LATASIL™

Latex Admix

101 Rapid Latex Admix
1776 Grout Enhancer
LATABOND™
4237 Latex Additive
4237 Rapid Latex Additive
3701 Mortar Admix

Waterproofing

HYDRO BAN®
9235 Waterproofing Membrane

Cement Grout

PERMACOLOR® Grout
Smooth Grout
Sanded Grout

Stain Resistant Grout

SPECTRALOCK® PRO Grout

Industrial Grout
