Specifying Polyaspartic Floor Coatings for Sustainability

Description:
This course explores the very latest in high performance resinous flooring technology, Polyaspartics coating systems. Learn more about where Polyaspartics coatings should and should not be specified while understanding key differences between standard epoxy, urethane and MMA coating systems. Become educated on the sustainable benefits that Polyaspartics coatings have to offer.

Learning Objectives:
At the end of the program, the participant will be able to:
1. Understand the background and underlying chemistry of polyaspartic coatings.
2. Determine key differences between polyaspartic coating systems and other coatings.
3. Develop a full working knowledge of how polyaspartic coatings may or may not augment the overall performance and sustainability of a resinous flooring system.
4. Become informed on what applications polyaspartic coatings may or may not be suitable for.

Approach:
A PowerPoint presentation that incorporates photo images, project installations and computer animation will be used. There will be a questions and answer period at the end of the program, however, the program is designed to be interactive and questions are encouraged throughout as well.

A/V Needed:
Electric power and a screen, video system or blank wall for the PowerPoint presentation. (The CES facilitator will provide the laptop and projector).

Target Audience:
Architect, Engineers, Specifiers, Owners and other Design Professionals in the commercial, residential and industrial markets.

Facilitator Qualifications:
The CES facilitators receive in house training on CES guidelines and presentation skills. All have extensive construction industry experience and up to 25 years in the tile and stone industry.

Cost:
Not Applicable. There is no fee for bringing this program into a firm or chapter meeting.
