

# SUPERCAP®

The Next Generation Slab™

## PROJECT SNAPSHOT

East Coast Poured Floors, Inc. was brought in to resolve the many elevation and substrate changes within Baltimore's St. Ignatius Church, a 100-plus year-old house of worship.

LATICRETE® SUPERCAP® FAST was specified in particular for its quick drying time, low prep and high compressive strength. Approximately 4,000 square feet in the entry rooms, chapel, sacristy, reception and meeting rooms were pumped with LATICRETE SUPERCAP FAST... and, all of these areas were 100% ready for finished flooring goods the very next day! One truck, two hours and we were done.

“This incredible, God-sent system saved the day!” noted one of the clergymen. Once again, East Coast Poured Floors and “The Power of the Pump” teamed up for a successful, high-performance, time and cost-efficient installation.
