### FEATURES/BENEFITS

- Single Component
- UV Stable and flexible
- Non-sag formula for floors and walls
- Colour - fast
- Very Easy to install and clean
- Chemical/stain and temperature resistant
- Non-cracking or powdering
- Suitable for joints of 1.5 mm to 12 mm
- No – odor during application
- Available in attractive colors
- Highly Durable

### USES

**All External and Internal Floor & Wall Grout Joints:**
- Residential & Institutional kitchens
- Cafeterias & Food joints
- Wash rooms & Clean rooms
- Swimming pools, Spa & Sauna
- Hospitals, Operation theatres, Laboratories
- Schools & Education Institutes
- Podium slabs, drive ways & Atriums
- Terraces & Balconies
- External & Internal Facades

### MANUFACTURER

**LATICRETE Middle East LLC.**  
P.O. Box. 86028, Ras Al Khaimah  
United Arab Emirates  
Telephone: + 971 7 244 6396  
Fax: + 971 7 244 5915  
Internet: www.laticrete.me

### PACKAGING / COLOR

**Packaging**  
4.5 kg & 1 kg pails  
Colors: Available in 10 LATICRETE® Colors
Suitable Substrates

- Engineered marble
- Vitrified tile / Porcelain tiles
- Ceramic tile
- Granite
- Marble
- Lime stone & Sand Stone
- Cobble stone
- Glass mosaic tiles
- Glass tiles
- Clay tiles / wire cut bricks
- Terracotta tiles

Shelf Life
Factory sealed containers of this product are guaranteed to be of first quality for one (1) year if stored at temperatures greater than 59°F (15°C) and less than 95°F (35°C).

Limitations
- Not for industrial use. For industrial applications exposed to high concentrations of food and mineral acids and to high heat, use LATAPoxy® 2000 Industrial Epoxy Grout.
- Maximum stain resistance is achieved 14 days after installation. Protect from exposure to acids and strong cleaners during this period.
- Adhesives/mastics, mortars and grouts for ceramic tile, pavers, brick and stone are not replacements for waterproof membranes. When a waterproof membrane is required, use LATICRETE® Waterproof Membrane.

Cautions
Consult SDS for more safety information.
Keep out of reach of children.

Warnings;
- DO NOT add water or any other liquid to the grout material. This will have an adverse effect on the product and void all warranties.
- Protect finished work from traffic until fully cured.
- STELLAR™ Grout might irritate eyes and skin. Avoid contact with eyes and/or prolonged contact with skin.
- Wear protective gear (gloves, long sleeve shirt, and safety glasses) when applying. Flush thoroughly with water in case of initial contact.
- DO NOT ingest internally. Silica sand may cause cancer or serious lung problems. See MSDS for more information.

**INSTALLATION**

**Surface Preparation**

Before starting to grout, remove debris in grout joints and lightly sponge (wet) the tile surface to remove dust and dirt. Do not clean tiles with acid cleaners. Substrate temperature must be between 60°F (16°C) and 90°F (32°C). In case the tiles are cleaned with acid, make sure to wash the area with potable water which removes the acid remains from the tile joints.

**Mixing**

Open the pail of STELLAR™ Grout and agitate with a spatula, margin trowel or drill machine fitted with paddle arrangement. Mix for 3 to 5 minutes till the time the grout material becomes creamy and workable. DO NOT MIX WATER, SOLVENTS, LATEX or any other liquids for workability.

**Application**

Use standard grouting techniques to work with Stellar Grout into tile joints. Stellar Grout can also be applied with a caulking gun. Be sure all grout joints are packed full. Remove as much excess material as possible with grout float before initial cleaning.

**Note:**
- Do not leave excess grout on the face of tiles.
- In case there is some unused grout material in the grout pail, make sure the lid is closed tightly so as to re-use the grout when application work starts in future course of time (within shelf life of product)

*For More information contact LATICRETE technical Service.*

**REMOVAL & CLEANING:**

Remove excess grout from the face of the tiles with the edge of the grout float. Hold the float at a 90° angle and pull it diagonally across the joints and tile to avoid pulling out the grout material from the joints.

**INITIAL CLEANING**

- Start the initial cleaning after 15-20 minutes
- Rinse your sponge before each cleaning by dipping the sponge in water.
- Squeeze as much water out of sponge as possible before placing on the tile after rinsing in the bucket. Change the bucket of water if needed.
- Place the sponge on the tile surface and use gently by giving very little pressure to ensure a full flush grout joint.

0- No stain visible/ no effect
5- Dense stain visible/ high effect

*Note: Specifications are subject to change without notification. Results shown are typical but reflects test procedures used. Actual field performance will depend on installation methods and site conditions.*
- Do not over wash grout joints
- Do not bend sponge as it pulls grouts from the joints

**FINAL CLEANING**
- Final cleaning may be started any time after 4 hours.
- Use Laticrete Special Stellar grout haze removing cleaner for removing the hazes on the tile.
- After a minimum period of 4 hours of application of the grout, use Laticrete Special Stellar grout haze removing cleaner, to clean the grouted area.
- Prepare the cleaner by diluting it with water adding 6 times of water by volume.
- Apply diluted haze remover (Use the cleaner after 1:6 dilution- Cleaner: water) on the surface, wait for 2 to 5 minutes allowing to soak the area completely.
- Use the scrubber given with the grout kit and run the scrubber in circular motion to remove the grout material, with low pressure to high pressure depending on the haze thickness and concentration, from tiles.
- Occasionally clean the scrubber in potable water, squeeze all the water, and keep working till the grout haze is removed.
- Finally, rub the tile surface lightly with sponge to remove any remaining grout haze.
- Occasionally clean the sponge in potable water, squeeze all the water and keep working till the grout haze is completely removed.

*Let the surface dry for 24 hours before allowing light foot traffic.*

**CURING TIME AND MAINTENANCE**
- Curing depends on the temperature and humidity.
- If the humidity is low, the curing will be faster.
- On high humidity conditions, the curing may takes little longer time than normal.
- The curing will be affected when the grouting area is exposed to water.
- Protect the grout area from water damping and rain.
- Protect external floor/ wall applications by using a tarpaulin sheet and cover the grout area if the weather is not favorable (Raining time)
- Lay it over the grout area when leaving in case it rains.
- Protect the grout area from chemicals and stain while curing.

**AVAILABILITY AND COST**

**Availability**
LATICRETE® materials are available worldwide. For distributor information, please contact LATICRETE
Telephone: For on-line distributor information, visit www.laticrete.com

**Cost**
Contact a LATICRETE closer distributor to obtain complete information and cost.

**WARRANTY**
The supplier warrants that the product will not deteriorate under normal conditions and use. The warranty validity of one (1) year.
Contact Technical Support for further information.

**MAINTENANCE**
LATICRETE products are of high quality designed to achieve lasting installations and avoid maintenance, however performance and durability may depend on properly maintaining products, depending of the cleaning products used.

LATICRETE and LATAPOXY® grouts require routine cleaning with neutral pH soap and water or LATICRETE cleaners. All other LATICRETE and LATAPOXY materials require no maintenance but proper installation as per instruction. Performance and durability may depend on properly maintaining of Installed area.

**Warning**
The information and the instructions in the data sheet, although based on knowledge gained through years of applications, are indicative. LATICRETE unable to directly control the installation conditions and modalities of application of products, do not assume any liability arising from their implementation. Those who want to use the LATICRETE® products must conduct adequate tests to determine the site specifications. Results shown are typical but reflect test procedures used. Actual field performance will depend on installation method and site conditions.
