

LEED PRODUCT INFORMATION

SPARTA-FLEX® PURE™

AQUA-FLEX WB/

HP SURFACE BUILD SL™FC™

GENERAL INFORMATION

HP Spartacote® incorporates several green-friendly materials into various monolithic flooring systems. Our HP Spartacote PURE™ line of coatings and systems are completely solvent and VOC-free, making them eligible to be used in LEED certified projects. Products used in such coating systems may contribute to LEED eligible points as follows...

LOW EMITTING MATERIAL

HP Spartacote® Products: Sparta-Flex®, Aqua-Flex WB/FC™, HP SurfaceBuild SL™ all contain 0-50 g/Liter VOC and may contribute to LEED EQ Credit 4.2: Low Emitting Material-Paints & Coatings.

REGIONAL MATERIAL CREDIT

Dependent on the location of the project, contact HP Spartacote directly to inquire. LEED MR Credit 5.1 and 5.2: Regional Materials & Manufactured Regionally.

CONSTRUCTION WASTE MATERIAL

HP Spartacote® containers are recycled/recyclable aluminum, HDPE and paper. HP Spartacote materials, once catalyzed, can easily be removed from mixing vessels - allowing them as well as product containers to be recycled with ease. Only amounts mixed and not used contribute to waste. This may contribute to LEED MR Credit 2.1 & 2.2: Construction Waste Management.
