Website:    laticrete.com

3. PRODUCT DESCRIPTION
The HYDRO BAN Shower Pan comes with a high density EPS pan along with HYDRO BAN Sheet Membrane to cover the pan (the HYDRO BAN Curb and Bonding Flange Drain is sold separately). The HYDRO BAN Sheet Membrane is a waterproof sheet membrane that is installed using a substrate appropriate LATICRETE® polymer fortified thin-set (sold separately). The HYDRO BAN Shower Pan gives installer the option to finish the shower walls using a variety of approved methods; cement backer board with HYDRO BAN Sheet Membrane, cement backer board with liquid applied HYDRO BAN or HYDRO BAN Board. Do it your way.

Advantages
• Pre-sloped pan eliminates need for traditional mud bed installations
• Lightweight and durable, easy to transport and handle during installation
• Can quickly and easily be modified to size on site
• Membrane exceeds ANSI A118.10 requirements and is IAPMO approved
• Membrane tested to ASTM E96/E96M Procedure E-0.06 Perms - approved for steam showers / rooms as single membrane
• Membrane is pliable – conforms easily to substrate
• Do it your way - allows installer to finish walls using HYDRO BAN Board or liquid or sheet membranes over CBB
• Complete line of accessories – single source supply
• Works in conjunction with LATICRETE tile and stone installation materials

Suitable Substrates
• Cement Backer Board
• Concrete
• Exterior Glue Plywood (Interior Only)
• Oriented Strand Board OSB (Interior Only)

The following is also included in each package:
HYDRO BAN Shower Pan
HYDRO BAN Sheet Membrane to cover pan
Data Sheet

Uses
• Industrial, commercial and residential bathrooms where a pre-sloped shower is required
• Stalled gang showers
• Pet showers

Shelf Life

Factory sealed containers of this product are guaranteed to be of first quality for five (5) years if stored at temperatures >32°F (0°C) and <110°F (43°C).

Limitations

- DO NOT bond to particle board, luan, interior glue plywood, Masonite® or hardwood surfaces.
- Do not use over dynamic expansion joints, structural cracks or cracks with vertical differential movement.
- HYDRO BAN® Sheet Membrane is not recommended for submerged applications. For these applications, use HYDRO BAN waterproofing membrane.
- Do not use over cracks >1/8" (3 mm) in width.
- Do not expose to negative hydrostatic pressure, rubber solvents or ketones.
- Must be covered with ceramic tile, stone, brick, screeds, terrazzo, or other traffic-bearing finish. Use protection board for temporary cover.
- Obtain approval by local building code authority before using product in shower pan applications.
- Do not install directly over single layer wood floors, plywood, tubs/showers/fountains or similar constructs.
- Not for use with HYDRO BAN Tile-In Bonding Flange Drain, use only the brushed, polished or oil rubbed bronze versions.
- Not for use beneath cement or other plaster finishes. Consult with plaster manufacturer for their recommendations when waterproofing membrane is required under plaster finishes.
- Not for use under self-leveling underlayments or decorative wear surfaces.
- Note: Surfaces must be structurally sound, stable and rigid enough to support ceramic/stone tile, thin brick and similar finishes. Substrate deflection under all live, dead and impact loads, including concentrated loads, must not exceed L/360 for thin bed ceramic tile/brick installations or L/480 for thin bed stone installations where L=span length.

Cautions

- Protect finished work from traffic until fully cured.
- Use care not to damage HYDRO BAN Sheet Membrane prior to installation of tile or stone finishes. Cover with protection board to protect from foot traffic and other trades when installing on horizontal surfaces.
- Wait a minimum of 24 hours after the installation before flood testing in order to allow the thin-set to fully cure and insure the integrity of all seams.
- For white and light-colored marbles, use a white LATICRETE® Latex Portland Cement Thin Set Mortar.

4. TECHNICAL DATA

Applicable Standard

- ASTM E96/E96M
- ANSI A118.10
- HYDRO BAN Sheet Membrane Meets or exceeds ANSI A118.10 specifications
- Physical properties shown below are for HYDRO BAN Sheet Membrane only

Specifications subject to change without notification. Results shown are typical but reflect test procedures used. Actual field performance will depend on installation methods and site conditions.

### 5. INSTALLATION

#### Surface Preparation
- Surface temperature must be 50 – 90°F (10 – 32°C) during application and for 24 hours after installation. All substrates must be structurally sound, clean and free of dirt, oil, grease, paint, laitance, efflorescence, concrete sealers or curing compounds. Make rough or uneven concrete smooth to a wood float or better finish with a suitable LATICRETE underlayment. Do not level with gypsum or asphalt based products. Maximum deviation in plane must not exceed 1/4" in 10 ft (6 mm in 3 m) with no more than 1/16" in 1 ft (1.5 mm in 0.3 m) variation between high spots. Dampen hot, dry surfaces and sweep off excess water—installation may be made on a damp surface.

1. Surfaces must be structurally sound, stable and rigid enough to support ceramic/stone tile, thin brick and similar finishes. Installer must verify that deflection under all live, dead and impact loads of interior plywood floors does not exceed industry standards of L/360 for ceramic tile and brick or L/480 for stone installations and L/600 for all exterior veneer applications where L=span length.

2. Minimum construction for interior plywood floors.

#### SUB-FLOOR: 5/8" (15 mm) thick exterior glue plywood, either plain with all sheet edges blocked or tongue and groove, over bridged joints spaced 16" (400 mm) o.c. maximum; fasten plywood 6" (150 mm) o.c. along sheet ends and 8" (200 mm) o.c. along intermediate supports with 8d ring-shank, coated or hot dip galvanized nails (or screws); allow 1/8" (3 mm) between sheet ends and 1/4" (6 mm) between sheets edges; all sheet ends must be supported by a framing member; glue sheets to with construction adhesive.

#### UNDERLAYMENT: 5/8" (15 mm) thick exterior glue plywood fastened 6" (150 mm) o.c. along sheet ends and 8" (200 mm) o.c. in the panel field (both directions) with 8d ring-shank, coated or hot dip galvanized nails (or screws); allow 1/8" (3 mm) to 1/4" (6 mm) between sheets and 1/4" (6 mm) between sheet edges and any abutting surfaces; offset underlayment joints from joints in sub-floor and stagger joints between sheet ends; glue underlayment to sub-floor with construction adhesive. Refer to Technical Data Sheet 152 “Bonding Ceramic Tile, Stone or Brick Over Wood Floors” for complete details.

#### Installation Preparatory Work
- Dry fit all materials prior to installation
- Ensure that wall studding and sill plates are square and plumb for proper fit of pan.
- Do not leave any holes in the substrate other than the one for the waste line connection as indicated below. Holes left from tub replacements and unused waste lines need to be filled and structurally sound to meet substrate deflection as indicated in Limitations above.
- The substrate will need a hole to accommodate the drain fitting and waste line when the pan is installed. The hole will need to be 6" (15 cm) in diameter.
- Sub floor under pan must be clean and level. Cut floor drainpipe 1-3/4" (44 mm) below floor level.

#### HYDRO BAN Shower Pan Installation
- Test fit the pan and bonding flange drain to make
certain they fit over the domestic drainpipe, flush and level with the floor.
- Remove the pan.
- If the pan needs to be site adjusted to fit the shower, use a circular saw or utility knife to cut the pan to the proper shower dimensions.
- Using a circular saw or utility knife recut the rabbet joints into the edges of the pan where required. The rabbet joint lip should be 3/4" (19 mm) thick and 1/2" (12 mm) wide.
- Again, dry fit the pan and bonding flange drain to make certain they properly fit over the drainpipe, flush and level with the floor.
- Apply a polymer-fortified mortar to the floor area using a 1/4" x 3/8" (6 mm x 9 mm) square or "U" notched trowel.
- Skim coat the underside of the HYDRO BAN® Shower Pan with a polymer-fortified mortar. Set the pan into the wet mortar and apply pressure to achieve complete coverage.
- Check pan for level and apply weight (thin-set bags) equally across pan for 30 minutes.

Wall Board Installation
- Apply a 1/4 to 1/2" (6 to 12 mm) continuous thick bead of HYDRO BAN® Adhesive & Sealant into the rabbet joint of the HYDRO BAN Shower Pan. Using 1/2" (12 mm) HYDRO BAN Board or cement backer board, set the board into the sealant until you see sealant oozing out along the joint. Remove excess sealant using a margin trowel ensuring a continuous seal at the joint.
- Fasten backer board per board manufacturer's installation instructions (for HYDRO BAN Board follow instructions in DS 040.0.) directly to framing with the appropriate screw starting 1 foot (30 cm) above the shower pan. Follow the instructions from the backer board manufacturer when treating seams and penetrations.

HYDRO BAN Preformed Curb (Sold Separately) Installation
- Next, determine location of HYDRO BAN Preformed Curb. Affix curb to the floor area using a 1/4" x 3/8" (6 mm x 9 mm) square or "U" notched trowel and skim coat the underside of the curb.
- Before setting curb in place, apply a bead of HYDRO BAN Adhesive & Sealant to HYDRO BAN Shower Pan channel and to the adjoining wall panels.

HYDRO BAN Membrane installation
- If installing HYDRO BAN Sheet Membrane over cement backer board follow the installation instructions in DS-041.0.
- If installing HYDRO BAN liquid applied waterproofing membrane over cement backer board follow the installation instructions in DS-663.0.

HYDRO BAN® Bonding Flange Drains
- First, if the waste line is already in place, dry fit the bonding flange drain making sure that it seats properly on the pan and floor and connects to the domestic waste line. If the waste line is not in place and the plumber will make the connection proceed with the installation without connecting the bonding flange drain to the waste line.
- Coat the bonding flange horizontal surfaces with two coats of HYDRO BAN liquid applied waterproofing membrane. When the first coat is dry to the touch apply the second coat. When the second coat is dry to the touch proceed with the HYDRO BAN Sheet Membrane installation over the pan and the bonding flange. (Alternatively install a HYDRO Ban peel and stick sheet membrane ring over the appropriate area on the bonding flange. Press firmly into place or roll the surface using a small wallpaper seam roller.)
- Apply thin-set around the opening where the bonding flange will sit. Apply PVC or ABS solvent and adhesive to the waste line and the bonding flange female portion of the connection on the bonding flange.
- Install the bonding flange and smooth out any thin-set that has oozed out during the installation.

Note: When connecting an ABS or PVC bonding flange drain to the domestic waste line the solvent choice is based on drain type. Follow manufacturer's instructions. (If a plumber is making the connection this step can be performed after the pan).

HYDRO BAN Sheet Membrane over the pan
- Install the HYDRO BAN Sheet Membrane over the HYDRO BAN Shower Pan and the bonding flange using a LATICRETE polymer fortified thin-set. Insure that the HYDRO BAN Sheet Membrane extends to the first 90° radius of the HYDRO BAN Bonding Flange Drain.
- Apply thin-set mortar with a 1/4" x 3/16" (6 mm x 5 mm) V-notched trowel. Press the HYDRO BAN Sheet Membrane firmly into the adhesive. Remove any trapped air and guarantee full adhesion to the material by spreading the adhesive from the inside out using a trowel or straightedge with rounded corners.
- Install sheet membrane up and over the curb being sure to overlap it onto the sealing tape between the pan and the curb or overlap onto the the pan sheet membrane by 2" (5 cm). The adjusting ring is installed with a LATICRETE polymer fortified thin-set when installing the tile in order to line up the grate with the tile.

Flood Testing
- Allow adhesive to cure fully before flood testing, a minimum of 24 hours after final cure at 70°F (21°C) and 50% RH.
- Cold and/or wet conditions will require a longer curing time.

Drain Grate and Tile Installation
- Install tile according to industry guidelines and installation instructions using a LATICRETE polymer fortified thin-set.
o Screw the HYDRO BAN Drain Grate down so it will be 1/16" (2 mm) below the final tile height with thin-set, cover the adjusting ring with thin-set when installing tile.

- DS 108.0 HYDRO BAN Adhesive & Sealant
- DS 663.0 HYDRO BAN
- DS 040.0 HYDRO BAN Board

6. AVAILABILITY AND COST

Availability
LATICRETE materials are available worldwide.

For Distributor Information, Call:
- Toll Free: 1.800.243.4788
- Telephone: +1.203.393.0010

For on-line distributor information, visit LATICRETE at laticrete.com

Cost
Contact a LATICRETE Distributor in your area.

7. WARRANTY

See 10. FILING SYSTEM:

8. MAINTENANCE

Non-finish LATICRETE and LATAPOXY installation materials require no maintenance but installation performance and durability may depend on properly maintaining products supplied by other manufacturers. Protect from foot traffic with a piece of thin plywood or heavy cardboard until tile is installed and thin-set and grout are cured.

9. TECHNICAL SERVICES

Technical Assistance
Information is available by calling the LATICRETE Technical Service Hotline:
- Toll Free: 1.800.243.4788, ext. 1235
- Telephone: +1.203.393.0010, ext. 1235
- Fax: +1.203.393.1948
