3. PRODUCT DESCRIPTION
NXT Level is a cement-based underlayment for use in leveling interior substrates. NXT Level produces a flat, smooth and hard surface for the installation of finished flooring. NXT Level can be placed from a 1/8” – 3” (3 – 76 mm) in a single lift.

Uses
- Commercial, retail (malls & shops)
- Health care, hospitals
- Education (schools & universities)
- Residential
- Hotels

Advantages
- Pourable and pumpable
- Inorganic; will not contribute to mold/mildew growth
- Suitable surface for most finished floor goods
- Can be applied directly over concrete testing at RH of 95% or less per ASTM F2170
- Direct replacement for DRYTEK LEVELEX

Suitable Substrates
- Concrete
- Vinyl Tile
- Cement Terrazzo
- Exterior Glue Plywood

- Ceramic Tile and Stone
- Cement Mortar Bed
- Cement Backer Board

Packaging
50LB (22.7KG) BAG / 48 per pallet /
Part: 0900-0050-21

2200LB (1000KG) SACK / 18 per truck /
Part: 0900-2200-21

Approximate Coverage

Shelf Life
Factory sealed containers of this product are guaranteed to be of first quality for one (1) year if stored off the ground in a dry area.

Limitations
- Do not install NXT Level over particleboard, chipboard, hardboard (Masonite®), Luan panels, asbestos, gypsum-based patching materials, asphalt, coal tar, or lightweight insulating concrete, or any other dimensionally unstable materials.
- NXT Level is not recommended for steel-wheeled traffic.
- For interior use only.
- Do not install when surface temperature is below 40°F (4°C) or above 90°F (32°C).
- Do not install over painted surfaces.
- Do not exceed recommended mixing ratio as indicated in mixing instructions. Over watering will weaken product properties.
- Never mix with cement or admixtures.
- Do not apply NXT Level over waterproofing or crack isolation membranes.
- Adhesives/mastics, mortars and grouts for ceramic tile, pavers, brick and stone are not replacements for waterproofing membranes. When a waterproofing membrane is required, use a LATICRETE® Waterproofing Membrane on top of the dry NXT Level.
- Not for use in submerged applications.

Cautions
- Read and understand the Product Data Sheet and Safety Data Sheet.
Surface Preparation

- Check www.laticrete.com for any technical bulletins or updated information about the product and its application.
- Contact your local LATICRETE Technical Sales Representative with any questions.
- Consult SDS for more safety information.
- Protect finished work from traffic until fully cured.
- Contains portland cement and silica sand. Causes serious eye damage and skin irritation. Avoid contact with eyes or prolonged contact with skin. In case of contact, flush thoroughly with water.
- Silica sand may cause cancer, respiratory irritation or serious lung problems. Do not breathe dust. Wear a respirator in dusty areas.
- Keep out of reach of children.

Specifications subject to change without notification. Results shown are typical but reflect test procedures used. Actual field performance will depend on installation methods and site conditions.

5. INSTALLATION

Surface Preparation

- Refer to TDS 230N NXT® Substrate Preparation and Primer Guide for more detailed surface preparation instructions.
- All concrete surfaces must achieve an ICRI CSP of 3-5.
- Clean substrate to eliminate dust, dirt, oil, grease, paint or any contaminants which may inhibit bonding. Do not use chemicals to clean substrate. Remove any loose particles by vacuuming and damp sponging.
- Refer to specific finished flooring industry requirements or standards for treatment of movement joints and cracks in the sub-floor. For exterior glue plywood substrates use 3.2# galvanized diamond metal lath.
- Maintain substrate temperature between 40 – 90°F (4 – 32°C) and air temperature between 50 – 90°F (10 – 32°C) during application and drying. Provide adequate ventilation to ensure uniform drying.

Priming

Use NXT® Primer with every application of NXT self-leveling underlayments. See DS 502.0 and TDS 230N LATICRETE Substrate Preparation and Primer Guide for more detailed dilution, approximate coverage and application instructions.

Mixing

NXT Level should be mixed with 4.0 – 4.5 quarts (3.8 – 4.3 l) of water per 50 lb (22.7 kg) bag. Do not over water. For manual application, add product to water and mix for 2 – 3 min with a heavy duty drill (650 rpm) to obtain a lump free mix. NXT Level can also be used in most pump equipment. Please consult with a LATICRETE representative to verify equipment compatibility. A flow test should always be performed to ensure that the mix is homogeneous and free from separation. The ideal flow range for NXT Level is 10 – 11" (250 – 280 mm) using the LATICRETE Flow Test Method. See TDS 235N – NXT self-leveling underlayment Flow Test - for more detailed instructions on performing flow tests.

Application

Substrate temperature must be between 40 – 90°F (4 – 32°C) during application and air temperature maintained between 50 – 90°F (10 – 32°C). Protect areas from direct sunlight. Do not use damp curing methods or curing and sealing compounds. If required to meet level tolerances, survey surface using a digital or electronic leveling device and apply level pegs as required. Adequate ventilation should be provided to ensure uniform drying. Pump or pour blended material onto substrate at an average thickness ranging between 1/8" to 3" (3–76 mm). Wood substrates need a minimum thickness of 1/2" (12 mm). Immediately following placement lightly smooth the surface and pour lines. When not using elevation pins the use of a gauge rake will assist in controlling material depth. Do not expose LATICRETE self-leveling underlayments to rolling dynamic loads, such as forklifts or scissor lifts, for at least 72 hours after installation at 70°F (21°C). Proper application is the responsibility of the user. Field visits by LATICRETE personnel are for the purpose of making technical recommendations only and not for supervising or providing quality control on the jobsite.

Flooring Installation

Finished floor goods may be installed as soon as 3 days after application, subject to thickness, drying conditions and type of flooring materials. Non-moisture sensitive tile and stone can be applied once self-leveling underlayment is walkable, approximately 3 – 4 hours. Always refer to finished floor manufacturer’s recommendations regarding installation instructions, restrictions, moisture conditions and compatibility. Always test performance suitability and compatibility of finished floor systems prior to their application. Sample surfaces should be installed as a field test so as to be representative of entire surface and tested for intended use.

6. AVAILABILITY AND COST

Availability

LATICRETE materials are available worldwide.
Cost
Contact a LATICRETE Distributor in your area.

7. WARRANTY
See 10. FILING SYSTEM:
- LATICRETE 5 Year System Warranty (United States and Canada)
- LATICRETE 10 Year System Warranty (United States and Canada)
- LATICRETE Product Warranty

8. MAINTENANCE
Non-finish LATICRETE and LATAPOXY installation materials require no maintenance but installation performance and durability may depend on properly maintaining products supplied by other manufacturers.

9. TECHNICAL SERVICES
Technical Assistance
Information is available by calling the LATICRETE Technical Service Hotline:
Toll Free: 1.800.243.4788, ext. 1235
Telephone: +1.203.393.0010, ext. 1235
Fax: +1.203.393.1948
