3. PRODUCT DESCRIPTION
LUMISEAL WB is a water-based, non-yellowing, blush resistant curing and sealing compound. When used as a sealer, LUMISEAL WB is designed to provide an attractive medium gloss finish on concrete substrates. LUMISEAL WB is formulated with advanced low VOC, self-crosslinking emulsion chemistry, providing a very durable film and excellent early water-resistance to whitening or blistering. LUMISEAL WB is suitable for use on interior, exterior, horizontal and vertical surfaces.

The durable film of LUMISEAL WB bonds easily to clean concrete surfaces. It forms a non-yellowing protective film that assures improved resistance to contaminants, stains, and abrasion. LUMISEAL WB offers superior protection when used over properly densified surfaces.

The advanced self-crosslinking chemistry of LUMISEAL WB transforms the easy-to-spray, pure acrylic polymer solution into a very hard, clear resin film that resists abrasion, stain and tire marking.

Uses
LUMISEAL WB is recommended to seal new and old concrete surfaces including decorative, colored, patterned patios, driveways, and walkways. Other applications include exposed aggregate, brick pavers, polished concrete and other concrete surfaces where a durable gloss and stain resistant sealer is required.

Specification Description
03 39 23.13: Acrylic curing and sealing compound: Non-yellowing, acrylic solids, curing compound; shall conform to ASTM C309 and be low VOC.

Advantages
- Non-yellowing, pure acrylic formulation
- Excellent curing and sealing properties
- Resists black tire marks
- Low odor

Suitable Substrates
- Freshly Placed Concrete
- Existing Concrete

Packaging
5 Gal (19 L)
55 Gal (208 L)

Approximate Coverage
According to older L&M data sheet.
First coat, curing - 300-400 ft²/gal (7.3 to 9.8 m²/L)
Second coat, gloss - 400-600 ft²/gal (9.8 to 14.7 m²/L)
Stamped concrete - 300 ft²/gal (7.3 m²/L)

Shelf Life
Containers are to be kept tightly sealed. Do not freeze. Store above 40°F (4°C). Stir well before using as some settlement will occur during storage. Shelf life is one year in factory-sealed containers when properly stored.

Limitations
- Heavy applications should be avoided for proper film formation
- For proper film development, apply only when the surface temperature is over 40°F (4°C) and the relative humidity is below 80%.
- Apply to freshly poured concrete after surface water has evaporated. Too much surface water can be detrimental to proper film formation.
- Periodic light applications are recommended to maintain gloss and protection
- May require multiple coats

Cautions
- Refer to Safety Data Sheet (SDS) for product safety information
- Use with adequate ventilation
- Avoid contact with skin, eyes and clothing
- Wear skin and eye protection
- Wash thoroughly after handling
- Do not take internally
- Do not return unused material to container
- Enhanced air circulation is desired to improve the drying rate and to remove organic solvent vapors
- DO NOT FREEZE

Mock-ups and field test areas are required in order to validate performance and appearance related characteristics (including but not limited to color, inherent surface variations, wear, anti-dusting, abrasion resistance, chemical resistance, stain resistance, coefficient of friction, etc.) to ensure system performance as specified for the intended use, and to determine approval of the decorative flooring system.

Specifications are subject to change without notification. Technical data shown in product data sheets are typical but reflect laboratory test procedures conducted in laboratory conditions. Actual field performance and test results will depend on installation methods and site conditions. Field test results will vary due to critical job site factors. All recommendations, statements and technical data contained in this data sheet are based on tests we believe to be reliable and correct, but accuracy and completeness of said tests are not guaranteed and are not be construed as a warranty or guaranty of any kind. Satisfactory results depend upon many factors beyond the control of LATICRETE International, Inc. User shall rely on their own information and tests to determine suitability of the product for the intended use and user assumes all risk, loss, damage, expense and liability resulting from their direct use, indirect use or consequential to their use of the product. LATICRETE shall not be liable to the buyer or any third party for any injury, loss or damage directly or indirectly resulting from use or inability to use the product.

5. INSTALLATION

Freshly placed concrete - Surface must be finished to specified requirements prior to the application of LUMISEAL WB™. Dampen the concrete and broom out all standing water immediately prior to application. Apply one uniform coat with low pressure spray and roller after surface water glaze has disappeared. Do not dilute or puddle. A second sealing coat may be applied any time afterward.

Existing Concrete - Surface must be degreased and cleaned of all contaminants with CITREX™ prior to the application of LUMISEAL WB. After dry, apply one or two uniform coats using a microfiber applicator, without puddling, as needed. Allow first coat to dry 2-3 hours before applying the second coat. Dry to the touch in 1 hour. Sealed concrete can ready for foot traffic in 12 hours.

Cleaning: Clean applicator equipment with water before sealer dries. After sealer dries, use aromatic solvent.

6. AVAILABILITY AND COST

Availability
L&M™ and LATICRETE® materials are available worldwide.

For Distributor Information, Call:
Toll Free: 1.800.243.4788
Telephone: +1.203.393.0010
For on-line distributor information, visit LATICRETE at www.laticrete.com.

Cost
Contact a LATICRETE Distributor in your area.

7. SHORT SPEC

033001: High solids, acrylic curing and sealing compound: Minimum 25% non-yellowing, acrylic solids curing compound; shall conform to ASTM C 309 and ASTM C 1315, Type I, Class A, be VOC compliant, and meet all local air quality regulations. "L&M LUMISEAL WB PLUS" as manufactured by LATICRETE International, Inc.

8. WARRANTY

See 10. FILING SYSTEM:
DS 230.13: LATICRETE Product

9. MAINTENANCE

The long term performance, appearance, and life expectancy of surface sealing products are critically dependent upon a good routine maintenance program designed specifically for the installed sealer type, traffic, and other conditions. Properly placed walk-off mats, inside and outside will help increase the life of the floor. Some cleaning products and equipment or improper use of products can damage a wear surface appearance over time. Reapplication may be necessary in heavy traffic areas with greater frequency.

10. TECHNICAL SERVICES

Technical Assistance
