3. PRODUCT DESCRIPTION
MVIS™ Premium Mortar Bed is a polymer fortified blend of carefully selected polymers, portland cement and graded aggregates. MVIS™ Premium Mortar Bed does not require the use of latex admix, you only need to add water to produce thick bed mortar with exceptional strength.

Uses
- Interior and exterior applications
- Wet and dry applications
- Conventional thick bed mortar applications
- Concrete repairs

Advantages
- For use as a scratch or finish coat in place of Type S or Type N mortar
- Polymer fortified – no need for latex additives
- Premixed – no job site blending of powders required
- Economical – saves time and money
- High strength formula
- Pumpable for large scale veneer projects
- Exceeds ASTM C270 compressive strength requirements for masonry veneer installations.

Substrates
- Concrete
- Stone
- Ceramic Tile

- Concrete Masonry
- Brick Masonry
- Exterior Glue Plywood*
- Cement Mortar Beds
- Cement Backer Board**
- Cement Plaster
- Cement Terrazzo

* For interior only, over cleavage membrane with wire reinforcing min. 2” (50 mm) thick
** Consult cement backer board manufacturer for specific installation recommendations and to verify acceptability for exterior use

Packaging
60 lb (27.3 kg) bag; 56 bags per pallet

Shelf Life
Factory sealed containers of this product are guaranteed to be of first quality for two (2) years if stored at temperatures >32°F (0°C) and <110°F (43°C).

Limitations
- Mastics, adhesive mortars and pointing mortars for masonry veneer, stone, tile, pavers and thin brick are not replacements for waterproofing membranes or air and water barrier. When a waterproofing membrane or air and water barrier is required, use an Air & Water Barrier (see Section 10 FILING SYSTEMS).
- For veneer installations using this product, consult local building code requirements regarding limitations and installation system specifications.
- Use LATAPOXY® 300 Adhesive for installing green marble, resin backed on water sensitive tile, stone and agglomerates (refer to DS 633.0 for more information)

Note: Surfaces must be structurally sound, stable and rigid enough to support manufactured masonry veneer, tile, thin brick and similar finishes. For exterior vertical installations over framed construction, the substrate deflection under all live, dead and impact loads, including concentrated loads, must not exceed L/600 where L=span length (except where local building codes specify more stringent deflection requirements).
Cautions
Consult SDS for more safety information.
- During cold weather, protect finished work from traffic until fully cured.
- Contains portland cement and silica sand. May irritate eyes and skin. Avoid contact with eyes or prolonged contact with skin. In case of contact, flush thoroughly with water.
- Do not take internally. Silica sand may cause cancer or serious lung problems. Avoid breathing dust. Wear a respirator in dusty areas.
- For white and light-colored stones, conduct test area to ensure no shadowing or staining is observed.
- Keep out of reach of children.

4. TECHNICAL DATA
Applicable Standards
ASTM C109, ASTM C270, ASTM C157, C270, EN13813 and ASTM C627

This product has been certified for Low Chemical Emissions (ULCOM/GG UL2818) under the UL GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes and Furnishings (UL 2818 Standard) by UL Environment.

As a Pumped Mortar for Renders and Plaster

MVIS™ Premium Mortar Bed is an EN13813 C30F7 mortar.

### Wall Renders—Application

Mix a 60 lb bag (27 kg) of MVIS Premium Mortar Bed to 0.8 – 0.9 gallon (3 – 3.4L) of water. Mix to a plastic consistency.

#### Wall Renders—Installation

No slurry bond coat is required prior to placing wall renders. Apply wall render with a steel trowel pressing mortar into good contact with the substrate. Apply “scratch coat” first – not to exceed 1/2” (12 mm) thickness. Scratch mortar before it hardens. After “scratch coat” hardens, apply the “brown or float coat” working the mortar into good contact with the scratch coat. Do not exceed 5/8” (15 mm) thickness per lift. Scratch all lifts that will receive additional float coats. Float wall with steel trowel and straight edges to form a plumb and true mortar surface. Allow the completed render coats to cure for 24 hours at 70°F (21°C) prior to the installation of masonry. If going over latex, a minimum 1/8” (12 mm) thickness is required.

#### Cold Weather Note

The setting of portland cement mortars and grouts are retarded by low temperatures. Protect finished work for an extended period when installing in cold weather.

#### Hot Weather Note

The evaporation of moisture in portland cement mortars and grouts is accelerated by hot, dry conditions. Apply mortar to dampened surfaces and protect freshly spread mortar and finished work when installing in temperatures over 90°F (32°C).

### Cleaning

Clean tools and masonry with water while the mortar is fresh.

6. AVAILABILITY AND COST

**Availability**

LATICRETE® and LATAPOXY® materials are available worldwide.

**For Distributor Information:**

- Toll Free: 1.800.243.4788
- Telephone: +1.203.393.0010
- For on-line Distributor information, visit LATICRETE at www.laticrete.com.

**Cost**

Contact a LATICRETE Distributor in your area.

Data Sheets are subject to change without notice. For latest revision, visit www.laticrete.com

DS-265.0-0517
7. WARRANTY
See 10. FILING SYSTEM:
   DS 230.13: LATICRETE® Product Warranty
A component of:
   DS 230.15: LATICRETE 15 Year System
                Warranty – For Steel or Wood Framed
                Exterior Facades (United States and Canada)
   DS 025.0:  LATICRETE 25 Year System
                Warranty (United States and Canada)

8. MAINTENANCE
LATICRETE and LATAPOXY® grouts and pointing mortars require
routine cleaning with a neutral pH soap and water. All other
LATICRETE and LATAPOXY materials require no maintenance but
installation performance and durability may depend on properly
maintaining products supplied by other manufacturers.
