- Use with adequate ventilation, avoid prolonged breathing of vapors.
- Flammable—store in safe location.
- Test a small area when applying to stone for compatibility.
- Keep out of reach of children.

4. INSTALLATION
Preparation
- Thoroughly clean all surfaces of dust, dirt tar, oils, and other debris. Remove rust and scale from metal surfaces by abrasive cleaning or wire brushing. Masonry surfaces should also be wire brushed and blown with compressed air to remove dust.
- Thoroughly clean and degrease all surfaces with an industrial solvent such as naptha, mineral spirits, xylene, toluene or MEK on a clean oil-free rag.

Application
- Sealant must be installed in the manner indicated for intended performance.
Consult the following details at www.laticrete.com for specific sealant installation applications:
- Shower Receptor–Waterproofing–Cement Backer Unit Walls ES B415
- Shower Receptor–Waterproofing Above Mortar Bed ES B421
- Bathtub/Shower Wall Waterproofing ES B412
- Waterproofing Membrane–Typical Pipe Penetration ES WP300
- Drain Detail–Explosion View ES WP302
- Waterproofing and Secondary Waterproofing Membrane–Drain Detail ES WP303
- Swimming Pool–Tank ES P601
- Swimming Pool–Deck/Trench Drain ES P601c
- For underwater applications and steam rooms, polyethylene foam backer rod is recommended. Use polyethylene tape on joints too shallow to accommodate foam rod. Polyethylene backer rod is a “closed” cell which is water repellent.
- Apply LATA SIL™ 9118 Primer to clean, dry surfaces by brushing, dipping, or spraying.
- Apply a thin layer evenly to the substrate–do not apply too thick as bond will break.
- Take care not to contaminate the veneer surface.
- Allow the primer to dry until all the solvent evaporates and is dry to the touch (generally 30–60 minutes at 70°F/21°C). Drying time depends on temperature, humidity conditions and the porosity of the substrate.
- Apply sealant as directed (see 6. Warranty).
