3. PRODUCT DESCRIPTION
LATICRETE SUPERCAP Moisture Vapor Control is a single-coat, 100% solids, liquid applied 2-part epoxy coating specifically designed for controlling the moisture vapor emission rate from new or existing concrete slabs prior to installing LATICRETE SUPERCAP underlayment. LATICRETE SUPERCAP Moisture Vapor Control exceeds ASTM F3010 standard with a perm rating of 0.052 grains/h/ft²/in. Hg (3 ng/h • m² • Pa) at only 12 mil thickness.

Uses
- Ensures protection of moisture/pH sensitive floor coverings
- Reduces MVER from ≤25 to below 3 lbs/1000 ft²/24 hr (170 μg/s • m)
- Use on concrete up to 100% RH / 14 pH
- Ideal for slab-on-grade construction and elevated slabs
- Allows for the installation of vinyl, rubber, VCT, carpet, wood, ceramic tile, stone and other moisture sensitive floor coverings and floor adhesives

Advantages
- Exceeds ASTM F3010 standard
- Component of the LATICRETE SUPERCAP system warranty
- Can be applied over new concrete in as little as 5 days
- Ability to apply finish floor goods or LATICRETE SUPERCAP underlayments in as soon as 12 hours
- VOC content (mixed) <10g/L – UL GREENGAURD Gold certified
- Low odor and easy to use
- Compatible non-water based adhesives for hardwood, vinyl, carpet and tile

Suitable Substrates
Concrete slabs (Interior use only)

Packaging
7324-0006-2 = Full Unit Kit*: 6.5 Gal (24.6 L)
- Part A – 2.2 Gal (8.3 L) packaged in a steel pail
- Part B – 4.3 Gal (16.3 L) packaged in a steel pail
3724-0003-2 = Mini Unit Kit*: 2.5 Gal (9.4 L)
- Part A – 0.8 Gal (2.8 L) packaged in a steel pail
- Part B – 1.7 Gal (6.6 L) packaged in a steel pail

* LATICRETE® SUPERCAP™ MOISTURE VAPOR CONTROL is a kit of two pails. Individual pail (Part A or Part B) cannot be purchased separately, and cannot be returned separately.

Coverage
LATICRETE SUPERCAP Moisture Vapor Control is to be applied at minimum thickness of 12 mils. LATICRETE SUPERCAP Moisture Vapor Control when applied at a minimum 12 mils will control moisture vapor emission rate up to 25 lbs/1,000 ft²/24 hr (1415 μg/ft²/hr) per ASTM F1869/maximum^ RH conditions per ASTM F2170. In order to help insure coverage, periodically check mil thickness using a LATICRETE SUPERCAP Wet Film Thickness Gauge.

**Coverage is approximate and will vary depending on CSP (concrete surface profile), mil thickness, absorption, and other field conditions.

No visible water or condensation on the surface.

 Tested according to ASTM E96 Wet Method.

Shelf Life
Factory sealed containers of this product are guaranteed to be offirst quality for two (2) years if stored at temperatures >32°F (0°C) and <110°F (43°C).

Limitations
- Interior use only
- LATICRETE SUPERCAP Moisture Vapor Control is not a replacement for waterproofing membranes and is not intended to stop liquid water intrusion. When a waterproofing membrane is required contact LATICRETE SUPERCAP Technical Sales Representative.

- All existing expansion joints, cold joints and control joints must be brought up through the LATICRETE SUPERCAP Moisture Vapor Control and the finish. Failure to honor movement joints will result in cracking and/or loss of bond.

- LATICRETE SUPERCAP is not responsible for moisture emission from expansion and isolation joints, existing cracks, or new cracks that may develop in the concrete slab after the system has been installed. See section 5 of this document for information on how to treat these areas.

Cautions
- Consult SDS for more safety information
- LATICRETE SUPERCAP Moisture Vapor Control Part A is harmful if swallowed. Harmful if inhaled. Causes severe skin burns and eye damage. May cause an allergic skin reaction. Suspected of damaging fertility or the unborn child. Toxic to aquatic life.

- LATICRETE SUPERCAP Moisture Vapor Control Part B causes skin irritation. Causes serious eye irritation. May cause an allergic skin reaction. Toxic to aquatic life with long lasting effects.

Data Sheets are subject to change without notice. For latest revision, visit www.laticretesupericap.com.

DS-061.0-0820
Surface temperature must be 50–90°F (10–32°C) during application and for 24 hours after installation. In all cases, the surface temperature of the prepared concrete slab must be warm enough to avoid condensation on the surface of the concrete.

**Joints, Cracks, Surface Depressions and Other Irregularities**

All joints and cracks should be evaluated and repaired if necessary prior to installation of Moisture Vapor Control. A good crack repair technique depends on knowing the causes and selecting appropriate repair procedures that take these causes into account. Repairing a crack without addressing the cause may only be a temporary fix. Successful long-term repair procedures must address the causes of the cracks as well as the cracks themselves. Refer to ACI 224.1R-07 for guidance on evaluation and repair of cracks in concrete. LATICRETE SUPERCAP product application over moving cracks and joints is not recommended.

1. Moving joints (e.g. expansion joints, isolation joints, etc.) and dynamic cracks must be honored up through the LATICRETE SUPERCAP Moisture Vapor Control. LATICRETE SUPERCAP is not responsible for vapor emission through untreated joints or for areas where cracks may develop later.

2. All non-moving joints and dormant cracks (e.g. saw cuts, surface cracks, grooves, control joints, etc.) must be cleaned out and free of all loose debris. Non-structural cracks up to 1/8" (3 mm) in width can be filled with LATICRETE SUPERCAP Moisture Vapor Control epoxy during main application. Inspect these areas to ensure cracks are completely filled with no voids.

3. Non-moving, dormant cracks greater than 1/8" (3 mm) wide, can be patched with mixture of 1 part LATICRETE SUPERCAP Moisture Vapor Control and 3 parts approved sand (same sand used with LATICRETE SUPERCAP SC500, LATICRETE SUPERCAP SC500 Plus and LATICRETE SUPERCAP SC500 LW). In a suitable container, such as an empty LATICRETE SUPERCAP Moisture Vapor Control pail, pour 1 part LATICRETE SUPERCAP Moisture Vapor Control pre-blended to 3 parts LATICRETE SUPERCAP qualified sand, using a 300 rpm drill with jiffy paddle, mix together for 2-3 minutes until the LATICRETE SUPERCAP Moisture Vapor Control and qualified sand mixture is consistent. Slowly pour the mixture into the crack, using the flat side of a trowel force the mortar into the crack. Surface crazing and hairline cracks do not need filling. Construction joints, expansion joints and large moving cracks that have lost aggregate lock (one side of crack is higher than the other) have structural implications and cannot be repaired using this method.

**Moisture Evaluation**

Moisture testing must be conducted in accordance with finish floor goods and adhesive manufacturers’ requirements prior to LATICRETE SUPERCAP Moisture Vapor Control application. When evaluating moisture conditions the HVAC system or a properly conditioned temporary enclosure must be operational and in place for the minimum specified time period recommended in the moisture test standard. The concrete floor slabs and the ambient air space above the floor must be at service temperature.
LATICRETE SUPERCAP
The Next Generation Slab®

and relative humidity for at least 48 hours before taking moisture measurements in the concrete slab. These conditions must remain throughout the test period to ensure accurate results.

Mixing
Before mixing, store resins at room temperature 65-85°F (18-30°C) for 24 hours to ensure ease of mixing. Mix Components A and B at a ratio of 1:2 by volume (components are packaged into the pails to the specified ratio). Pour the A component into the larger B component steel pail. Verify that all of the Part A liquid is drained from pail. Mix with a slow speed drill (<300 RPM) with a jiffy blade for 3 minutes, assuring mixture is fully uniform and that all ribs of contrasting shade are completely eliminated. Pour the fully mixed material onto the substrate immediately after mixing.

NOTE: Do not mix LATICRETE® SUPERCAP™ Moisture Vapor Control in a plastic bucket as mix generates excessive heat!

Application
Pour ribbons of LATICRETE SUPERCAP Moisture Vapor Control onto the prepared concrete and spread using appropriate round or square notch squeegee that is designed to apply the desired mil thickness in a single coat. Apply an even coat making sure to cover all areas thoroughly. Immediately apply with no transfer, while epoxy is still wet, use a high quality 3/8” (9mm) nap non-shedding paint roller to back-roll at 90° from the squeegee direction to help ensure full coverage and uniform thickness. Replace worn squeegee blades and paint rollers when necessary to help ensure proper application. Use a paint brush to apply epoxy around penetrations, columns, and any other obstructions. Periodically check mil thickness using a LATICRETE SUPERCAP Wet Film Thickness Gauge. Allow to cure for 12 hours at 50-90°F (10-32°C) prior to installation of underlayment or finish flooring. Always consult flooring and adhesive manufacturer’s installation instructions, restrictions and confirm compatibility with LATICRETE SUPERCAP Moisture Vapor Control. Always test performance and compatibility of floor systems prior to application.

Flooring and Self-Leveling Underlayments Installation
In all cases the LATICRETE SUPERCAP Moisture Vapor Control surface must be protected from traffic, dust, debris, rain, and any other contaminants. LATICRETE SUPERCAP self-leveling underlayments shall be installed over LATICRETE SUPERCAP Moisture Vapor Control as soon as the epoxy is slightly tacky to the touch, after a minimum of 24 hours. Always refer to finished floor manufacturer’s recommendations regarding installation instructions, restrictions, moisture conditions and compatibility. Always test performance suitability and compatibility of finished floor systems prior to their application. Sample surfaces should be installed as a field test so as to be representative of entire surface and tested for intended use.

6. AVAILABILITY
Availability
LATICRETE SUPERCAP materials are available exclusively

For Information, Call:
• Toll Free: 1.800.243.4788, ext. 1950

For on-line information, visit LATICRETE SUPERCAP at www.laticretesupercap.com.

7. WARRANTY
See 10. FILING SYSTEM
• LATICRETE 1 Year Product Warranty DS230.13.

8. MAINTENANCE
LATICRETE, LATICRETE SUPERCAP and LATAPOXY® installation materials require no maintenance but installation performance and durability may depend on properly maintaining products supplied by other manufacturers.

9. TECHNICAL SERVICES
Technical Assistance
